WORK EXPERIENCE

Software Application Engineer, Intel Penang

Bayan Lepas • May 2026 - Present

Projects:

- Xbap to Angular migration: Conduct functional testing on various Station Controllers to verify that the newly migrated Angular UI is displayed correctly, and provide debugging support for any errors encountered during testing.
- V8 Simulation Tool: Develop a simulation tool for the Station Controller that automates class testing to validate functionality before code is deployed to production. This tool improves efficiency by saving approximately **2 man-hours per week**.

Intern, Micron Memory Malaysia Sdn Bhd Penang

Batu Kawan • June 2025 - Dec 2025

Projects:

- Rework SSD Web App: Developed a web application using React (frontend) and Flask (backend) that allows operators for SSD module to track rework availability by entering lot IDs through the web interface. This solution improves efficiency by saving **4 man-hours per week**.
- Tester Compliance Dashboard: Built a Power BI dashboard connected to a MySQL database to visualize daily and weekly tester compliance using line charts, pie charts, and detailed reports. This automation eliminates the need for manual database tracking, saving approximately **0.5 man-hours per day**.
- Depanel Watchdog: "Created a Robotic Process Automation (RPA) system in C# to monitor Snowflake and MySQL data every 45 minutes, automatically sending Outlook email alerts when specific conditions are met. This solution saves approximately **2 hours per week** by eliminating the need for users to manually track log files, requiring attention only when an error is detected.
- Advanced Wavefront Analytics: Designed a web application to visualize the flow of lots across various Step IDs, enabling users to filter and analyze data retrieved from MAM and SAP systems.
- Toolview and APF Formatter: Managed the addition of new tools, investigated missing lot issues, and implemented new business logic and rules based on stakeholder requirements.
- MMP Compliance & Ethics Training Dashboard: Built a Power BI dashboard connected to a MySQL database and SharePoint to visualize Batu Kawan site Ethics Training compliance through bar charts, summarisation, and detailed reports. This automation eliminates the need for manual database tracking, saving approximately **0.5 man-hours per week**.

Volunteering Activities:

- 12 Manufacturing Discipline Workshop: Secured 5th place in the 12 Manufacturing Discipline Workshop competition while gaining valuable knowledge about the 12 disciplines.
- Fur-tastic Fiesta: Assisted in organizing the Fur-tastic Fiesta event in collaboration with IAPWA to support animal welfare initiatives; contributed to achieving the fundraising goal of RM10,000.

Additional Training:

- Agentic AI Course - Abundant: Completed the Agentic AI Course by Abundant, gaining foundational knowledge of Agentic AI concepts and distinctions from Generative AI through theoretical learning.
- Agentic AI Course - Iverson: Completed the Agentic AI Course by Iverson, and advanced program focused on building AI agents using Copilot Studio and UiPath Studio, and developing custom LLMs with Python.

Projects:

- Virtual Keyboard: Developed a C#-based virtual keyboard for CNC machine operators, enabling touch-screen input and improving operational efficiency.
- IT and Hardware Support: Assisted staff with data migration to OneDrive, RAM and SSD upgrades, and hardware maintenance, ensuring smooth daily operations and improved system performance.

EDUCATION

Bachelor of Information Technology (Honours) in Software Systems Development

Tunku Abdul Rahman University Management and Technology, Penang

September 2023 - December 2025 (CGPA: 3.81/4.0)

- Final Year Project: Streamlining IKEA staff Restocking Routes System
- MUET Grade: BAND 4
- Achievements: President List (202405) (202409)
Dean List (202501)

Self Projects

RPA - Google Forms and Microsoft Forms Spammer

- Built a Selenium(Python) script to auto-submit forms after one user entry, helping university students to collect enough responses for surveys. User even can customized their requirement for each questions.

RPA - Clinic Appointment System

- Purpose: To compare UiPath, Selenium and Automation Anywhere for RPA implementation
- Designed an RPA workflow to automate clinic appointments: Detects “Appointment” keyword, sends Google Form, validates availability, reschedules if needed, confirms booking automatically, and automatically booked doctor’s calendar.
- Conclusion: Selenium(Python) have the best Scalability and Flexibility

RPA - AI Daily Stock Newsletter (make.com + Gemini 2.5 Flash)

- Built an make.com workflow to automatically generate a daily AI-powered stock newsletter.
- Integrated the Gemini 2.5 Flash model to summarize stock price movements and related news, delivering concise updates directly to my telegram channel.
- Benefit: Saves about 30 minutes per day by manually go through the news and summarize by myself.

TECHNICAL SKILLS

Programming Language

- Java, PHP, C#, C, Dart, Solidity, Python, JavaScript, HTML, CSS, SECS/GEM

Framework

- Node.js, React Native, Flask, ASP.NET, Bootstrap5, Flutter

Database

- MySQL, SQLite, MongoDB, Snowflake, Amazon Web Services

RPA Tools

- UiPath, Power App, Selenium(Python), Automation Anywhere, n8n, make.com

Dashboard

- Power BI, Tableau

ERP Software

- SAP, MAM

SOFT SKILLS

- Problem Solving, Interpersonal Skills, Communication, Self-Motivate, Presentation & Stakeholder Engagement
